

SUSTAINABILITY STATEMENT

Farm Fresh Berhad (“FFB” or the “Company”) aspires to be a leader in corporate sustainability. We are committed to the journey - as a business partner, an employer, a community member, an environmental steward and a value creator for shareholders. By thinking and acting sustainably, we will deliver excellent customer service and strong financial results and position the company for a strong future.

At FFB, sustainability is the way we manage and operate our business to best serve our customers, care for the environment, secure profits, drive long-term prosperity and giving back to the communities.

Sustainability is a business method that ensures safety, efficiency and responsibility in a manner that protects and enhance FFB’s employees, communities, shareholders and the environment, now and in the future.

Our daily operations align business performance with a commitment to environmental, social and community stewardship encompassing three elements:

a) Reduce the environmental footprint of our operations

- Produce and transports goods in a manner that minimizes community and environmental impacts.
- Reduce fuel, energy, water and other resources needed to produce each ton of our products.
- Increase recycling and reuse efforts through waste management and minimization.
- Strive to manage the FFB supply chain in consideration of environmental effects and good governance.

b) Engage openly on sustainability issues

- Communicate regularly with customers, employees and external stakeholders on sustainability issues, goals and efforts.
- Provide opportunities to customers, suppliers, employees and communities to actively participate in sustainability programs.
- Increase transparency and disclosure of our sustainability performance through our annual Corporate Social Responsibility Report and related sustainability disclosures.

c) Support sustainable development

- Collaborate with customers and communities to grow sustainably, considering social, economic and environmental effects.
- Invest and build innovative infrastructure to support operation both local and overseas.
